Blue Pelican Java May 27 2020 "Blue Pelican Java" is a somewhat unusual high school computer science textbook. Most computer science texts will begin with a section on the history of computers followed with a flurry of definitions that are just "so many words" to the average student. The approach here is to first give the student some experience upon which to hang the definitions that come later. The usual practice of introducing classes and objects is deferred until the student has a firm grasp of the fundamentals (loops, decision structures, etc). Thus, the beginning student is not overwhelmed by the simultaneous introduction of OOPs and the fundamentals. The book includes plenty of exercises (many in "contest" form), programming projects, and a huge appendix.

**The Three Musketeers II** Apr 18 2022 France's fate hangs in the balance! In this second part of Dumas' classic, our heroes must race across Europe to save the day. It all begins with Queen Anne of France, who is having an affair with the English Duke of Buckingham. Hoping to expose the tryst, and thereby enrage King Louix XIII into declaring war, Cardinal Richelieu plans a ball. He suggests the Queen wear a necklace that the

King gifted her. But the necklace is with Buckingham. The Musketeers' mission is to bring back the jewellery, doing battle with agents of the Cardinal along the way. It's a breathless adventure, set across 17th Century Paris, Calais, and London. And this volume also introduces D'Artagnan's infatuation with the mysterious Milady. Alexandre Dumas (1802 - 1870) was a hugely popular 19th century French writer. Born of mixed French and Haitian heritage, Dumas first rose to prominence in Paris as a playwright, but later gained international fame with his historical fiction. Often co-authored with other writers, these stories wove together swashbuckling adventure, romance, and real events from France's past. Among the best known are "The Three Musketeers", and its sequels "Twenty Years After", and "Le Vicomte de Bragelonne: Ten Years Later". Set across four decades, this trilogy follows the rise of the dashing D'Artagnan—from hot-headed soldier to trusted captain under Louis XIV. Dumas' other novels include "The Count of Monte Cristo" and "The Black Tulip". His works have been adapted into more than 200 movies, including The Man in the Iron Mask starring Leonardo DiCaprio.

The Contradictions of Austerity Apr 06 2021 The great financial crisis of 2008 and the ensuing global economic and financial turmoil have launched a search for "models" for recovery. The advocates of austerity present the Baltic States as countries that through discipline and sacrifice showed the way out of crisis. They have proposed the "Baltic model" of radical public sector

cuts, wage reductions, labor market reforms and reductions in living standards for other troubled Eurozone countries to emulate. Yet, the reality of the Baltic "austerity fix" has been neither fully accepted by its peoples, nor is it fully a success. This book explains why and what are the real social and economic costs of the Baltic austerity model. We examine each of the Baltic States by connecting national level studies within a European and global political economy, thereby delivering comparative breadth that supersedes localized understandings of the crisis. Thus for each of the three Baltic states, individual chapters explore the different economic and social dimensions of neo-liberal post-communism and the subsequent wider global economic and financial crisis in which these newly financialized economies have found themselves especially vulnerable. The "austerity model" adopted by Baltic national governments in response to the crisis reveals the profound vulnerabilities created by their unwavering commitment to liberalized economies, not least in terms of the significant "exit" of their labor forces and consequent population loss. This book looks beyond basic financial metrics claiming a success story for the Baltic austerity model to reveal the damaging economic and social consequences, first of neo-liberal policies adopted during transition, and latterly of austerity measures based on "internal devaluation." Combined these policies undermine the possibility of longer-term recovery and even social and economic sustainability, not to mention prospects for successful integration in the now-faltering European project that has departed from its "Social Model" roots.

Regulation of Phytochemicals by Molecular Techniques Jul 10  
2021 The papers assembled in this volume were originally  
presented at the joint meeting of the Phytochemical Society of  
North America and the Mid-Atlantic Plant Molecular Biology  
Society, in August 2000. The symposium from which these  
chapters were prepared was entitled "Regulation of  
Phytochemicals by Molecular Techniques" and was organised  
by James Saunders and Ben Matthews. This joint meeting was  
timely because of recent landmark advances in molecular  
biology and genomics as well as the renewed interest in  
phytochemistry as a rich source of nutraceuticals, drugs, and  
alternatives to synthetic agriculture pesticides. Progress in  
genome sequencing in plants such as *Arabidopsis* and rice has  
been remarkable, as have expressed sequence tag (EST) projects  
in other plants, including maize and soybean. Recently, private  
and public sector participants of the Human Genome Project  
announced that a rough draft of the human genome has been  
constructed. These advances directly influence phytochemical  
investigations by providing both insight and tools for exploring  
and manipulating genomes. The chapters cover a wide range of  
applications from molecular biology to phytochemistry, and  
from basic studies on promoters and gene expression to pathway  
regulation and engineering with transformed plants. A number  
of noteworthy aspects emerge from this volume: applications of  
molecular biology to phytochemical practical problems are  
succeeding; newly emerging molecular tools promise to open  
new doors to discovery; and remarkable progress has already

occurred in phytochemical pathway engineering.

**Water Management Challenges in Global Change** Aug 11

2021 Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and

irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. *Water Management Challenges in Global Change* will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.
